

Assets and Files All Over the Place? Check out Alienbrain...

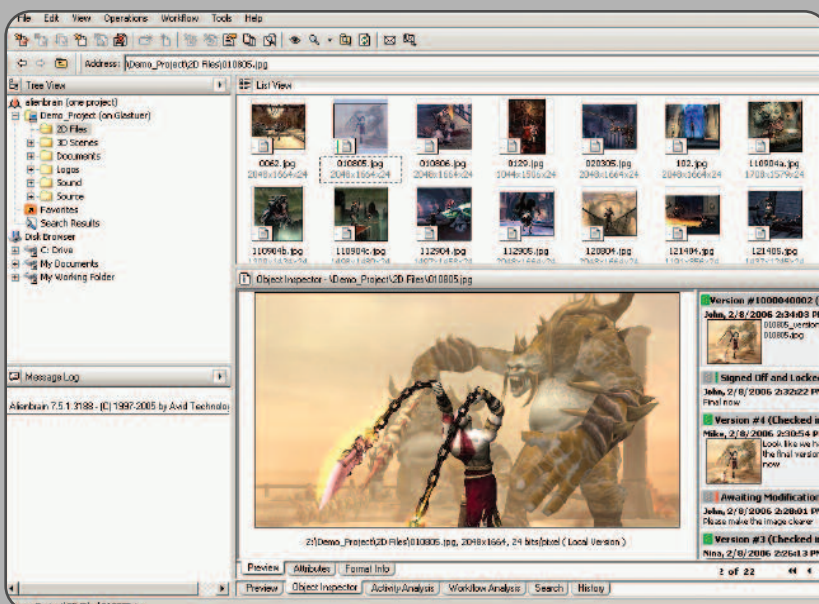

Creating content is your main concern and file management just steals precious time. **But:**

- Have you ever lost a file?
- Have you ever wasted time when searching for the right version?
- Have you ever used or sent the wrong version of a file?

If that's the case, you should think about using Alienbrain, THE Asset Management for artists, in your next project. It securely stores, versions and tracks all assets and related data and seamlessly integrates into complex production environments.

Alienbrain's key benefits:

1. Alienbrain stores all 3D and project assets and information about them in a central repository, shares, locks and tracks file revisions as they evolve. Access to and operations in the repository can be controlled in several ways, enabling managers to choose the right balance between security and parallel working.
2. Alienbrain specifically targets the requirements of artists with powerful 3D application integration (i.e. XSI, 3ds Max, Maya) and preview and thumbnails. Through its consistent visual way of working and a highly intuitive user interface, Alienbrain brings the benefits of version control and configuration management into the reach of highly creative, yet non-technical users, thus reducing the learning curve and increasing overall team productivity.
3. Alienbrain is designed to handle next-generation productions in terms of team size and asset volume with a highly scalable and modular architecture. Production throughput has been optimized for media-rich large binary assets reducing the team's overall turn-around times when approaching important milestones.
4. Alienbrain provides a full set of highly customizable workflow templates and image annotations as well as built-in messaging and email support, designed to trace project status and create project reports at any time, thus enabling managers and project leads to efficiently allocate resources, avoid bottlenecks and keep the project on track.

If you'd like to see how it works you should take a 3-minute **product tour** at <http://www.alienbrain.com/products/tour/>
